In. this latter case, nothing in relation to the link-motion is disturbed, and the original diagram of ideal eccentrics (Fig. 39) will serve, the only difference being a change of the crank from OK to OK , and the latter line is the base line for the new diagram, as regards the angles of advance, while OK remains the centre line of the locus. Tins result is identical with that obtained before in Fig. 38, but by this way of reasoning we can easily ascertain through what angle the crank should be shifted in order to get the line J i at right angles with the new base line Fig OK . This angle is evidently = $IW/3$. (See Fig. 29.) If the link is as shown in Fig. 40, the crank need only be shifted so that the points i and i (Fig....
