*The publication is simple in go through preferable to fully grasp. I am quite late in start reading this one, but better then never. It is extremely difficult to leave it before concluding, once you begin to read the book.*

## THE GROUNDWATER - SURFACE WATER INTERACTION

LAP Lambert Academic Publishing Okt 2012, 2012. Taschenbuch. Book Condition: Neu. 220x150x4 mm. This item is printed on demand - Print on Demand Neuware - The interaction between groundwater and surface water is one of the main topics of interest in hydrogeology. It is recognized that such interaction affects quantitatively (through exchanged of water volumes leading to complex flow patterns) and qualitatively (by contaminant transport) both water systems. Today, the most common approach for analyzing such interactions is mathematical modeling. This book gives an attempt to analyze the interaction between the aquifer system and the lakes Plumbuita and Fundeni, located in Bucharest City, Romania. For the qualitative assessment of the groundwater, four hypothetical contaminant transport models (for nitrate which was found with concentrations exceeding the admissible threshold) were developed. The contamination source was considered to be the sewer system that is located at only three meters above the first aquifer system. Such technique, as the one approached for this case of study, is believed to allow the understanding of the communication between the two systems (groundwater and surface water). 72 pp. Englisch.
